

THIS IS GEO

PRIVATE BETA OVERVIEW

AI SEARCH VISIBILITY, MEASURED.

See what AI sees.
Fix what it misses.

FOUNDING PRO

\$129 /month

Up to ten qualified domains

INFLECTION POINT

HUMAN-LED GROWTH SYSTEMS

THE PROBLEM

AI DISCOVERY IS NOW A BUSINESS QUESTION.

Most teams can see traditional search traffic. Far fewer can answer what grounded AI systems can discover, understand, trust, cite, or recommend about their brand - and which site changes deserve attention first.

01

Can AI access the right pages?

Crawler access, robots, sitemaps, canonicals and rendered content.

02

Does it understand the brand?

Entity facts, architecture, authorship, locations, offerings and consistency.

03

Can it reuse and support answers?

Direct answers, structured information, evidence, originality and source fitness.

04

What happens in observed AI search?

Prompt coverage, citations, mentions, prominence, sentiment and competitors.

TWO MEASUREMENTS

READINESS IS NOT VISIBILITY.

A strong site may be absent from one answer. A visible brand may still have serious technical or evidence gaps. This Is GEO reports both without pretending one proves the other.

GEO READINESS

/50

A disclosed, versioned site assessment covering AI access, entity clarity, answer-ready content, evidence and authority, and external validation.

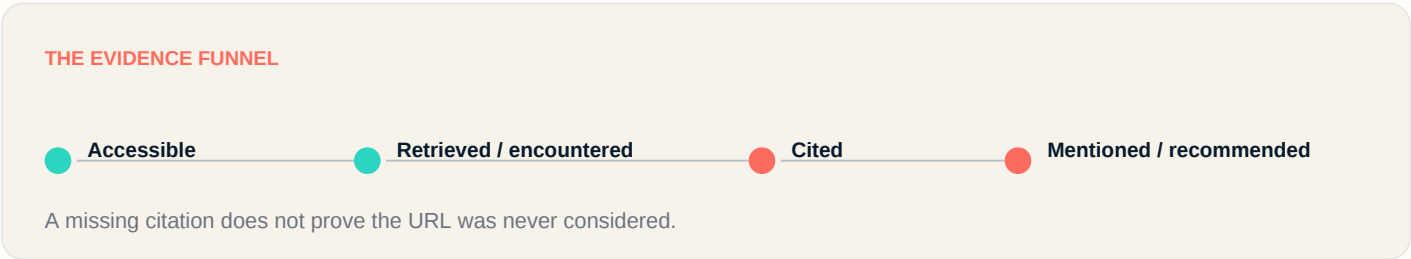

Incomplete evidence produces a confirmed floor, evaluated denominator, coverage and possible range - not an inflated final score.

OBSERVED AI VISIBILITY

MEASURED

A fixed, dated prompt panel records citations, mentions, recommendations, coverage, prominence, sentiment and competitor-relative results on providers actually tested.

API measurements are labeled as API measurements. Untested platforms appear as pending, not zero.

FOUR CONTROLLED STEPS

FROM DOMAIN TO VERIFIED ROADMAP.

The beta pairs bounded automation with analyst review. Every claim stays tied to retained evidence and a disclosed method.

1

CONFIRM THE UNIVERSE

Domain, priority pages, brand facts, business questions, competitors, locale and provider scope.

2

COLLECT EVIDENCE

A broader discovery crawl plus deep analysis of thirty priority pages; prompt runs retain dates, models, citations and failures.

3

REVIEW THE REPORT

An Inflection Point analyst checks findings, narrative, limitations and implementation guidance before delivery.

4

FIX AND VERIFY

You receive tickets and a 30/60/90-day plan. Weekly rescans compare observable before-and-after evidence.

\$129/MONTH

WHAT THE FIRST TEN DOMAINS RECEIVE.

The standard \$149/month Pro scope at a founding discount, plus analyst review while the beta workflow is validated.

SCOPE

- 1 website and up to 3 users
- 500-URL discovery crawl
- 30 priority pages deeply analyzed
- 50 governed AI-search questions
- 5 confirmed competitors

DELIVERY

- Weekly rescans and score history
- Mention and citation monitoring
- Implementation briefs and developer tickets
- Change verification and 30/60/90-day roadmap
- Analyst-reviewed web report and executive PDF

IMPORTANT BETA BOUNDARY

Current provider coverage is disclosed before enrollment and in every report. The first live baseline uses the Perplexity API; additional platforms remain pending until their adapters and acceptance tests pass. Applying does not create a subscription, authorize a charge, start a scan or grant site access.

FOUNDING COHORT

BRING ONE WEBSITE YOU WANT TO UNDERSTAND.

This is a strong fit when you want a defensible baseline, specific implementation priorities and a repeatable way to track what changed. It is not a promise of placement in any AI answer.

WHAT YOU PROVIDE

- A public site you control or are authorized to assess
- The brand facts and business questions that matter
- One to five competitors to confirm
- A person who can review recommendations and approve implementation

WHAT HAPPENS NEXT

- We review the domain for beta fit
- Qualified participants receive exact scope, terms and privacy notice
- You separately approve payment and the audit start
- The report is reviewed before it is released to you
